Documents required for the quality management system are controlled by **EVEREST ENGINEERING WORKS**.

The procedure addresses:

- a) Approval of documents for adequacy prior to issue;
- b) The- review, revision and re-approval of documents;
- c) Identification of the current revision status of documents;
- d) Ensuring that relevant versions of applicable documents are available at points of use;
- e) Ensuring that documents remain legible, readily identifiable and retrievable;
- f) Ensuring that documents of external origin determined by the organization to be necessary for the planning and operation of the quality management system are identified and their distribution controlled; and
- g) Prevention of unintended use of obsolete documents, and application of suitable identification to them if they are retained for any purpose.

h) Documents defined as quality records 9 are controlled.

EVEREST ENGINEERING WORKS top management provides

ENGINEERING WORKS Quality Management System and is
documented in a form suitable for EVEREST ENGINEERING WORKS method of operation.
In planning the processes for realization of product, EVEREST ENGINEERING WORKS determines the following,
as appropriate:
a) Quality objectives for the product, project or contract;b) The need to establish processes and documents, and to provide resources and facilities specific to the product;

c) Required verification, validation monitoring, measurement, inspection and test activities specific to the product and criteria for product acceptance.

The records those are necessary to provide confidence of conformity of the processes and resulting product.

customer requirements together with additional requirements determined by the organization for product development, execution, manufacturing, checking and after sales support. This review is conducted prior to the commitment to supply a

	conformity of the processes and resulting product.
Ref: Flow Cha	art (DC – FC – 01) for Document Control.
7.2	Customer-Related Processes
7.2.1	Determination of requirements related to the product.
	EVEREST ENGINEERING WORKS determines customer requirements including:
	a) Product requirements based on the data provided by the customer.
	b) Product requirements not specified by the customer but necessary as an integral part of the product design.
	c) Obligations applicable to product, including regulatory and legal requirements.
	d) Any additional requirements considered necessary by the EVEREST ENGINEERING WORKS.
Ref: The flowc	hart (CR – FC – 01) for contract review.
7.2.2	Review of requirements related to the product.
	EVEREST ENGINEERING WORKS reviews the identified

	Everest Er	ngineering V	Vorks

				Page 15 of 28
9001:2008	0	1 st Nov. 2011	1	

product to the customer (e.g. submission of a tender, acceptance of a contract or order) and ensure that:

- a) Product requirements are defined:
- Where the customer provides no documented statement of requirement, the customer requirements are confirmed before acceptance;
- c) Contract or order requirements differing from those previously expressed (e.g. in a tender or quotation) are resolved; and
- d) The organization has the ability to meet defined requirements.

The results of the review and subsequent follow-up actions are recorded by **EVEREST ENGINEERING WORKS**.

Where the product requirements are changed, **EVEREST ENGINEERING WORKS** ensures that relevant documentation is amended. **EVEREST ENGINEERING WORKS** ensures that relevant personnel are made aware of the changed requirements.

Ref: The flowchart (CR - FC - 01) for contract review.

7.2.3	Customer Communication
	EVEREST ENGINEERING WORKS identifies and
	implements arrangements for communication with customers relating to: a) Product information;
	 b) Inquiries, contracts or order handling, including amendments;
	Customer feedback, including customer complaints.

Ref: The flowchart (CR –FC-01) for contract review.

The flowchart (CAPA – FC – 01) for corrective & preventive action plan. The flowchart (CUSUP – FC – 01) for customer satisfaction survey.

order to maintain conformity to requirements. As applicable preservation includes identification, handling, packaging, storage and protection preservation also apply to constituent parts of a product.

Ref: Control of product (Inspection reports), Identification & tractability (Tag / Product code no. / Color code), Handling, packaging, storage, protection and delivery (store slip / dispatch register)

7.6 Control of Measuring and Monitoring Equipment

EVEREST ENGINEERING WORKS shall determine the monitoring and measurement to undertaken and the monitoring and measuring equipments needed to provide evidence of conformity of product to determined requirements. EVEREST ENGINEERING WORKS shall establish processes to ensure that monitoring and measurement can be carried out and are carried out in a manner that is consistent with the monitoring and measurement requirements.

Where necessary to ensure valid results, measuring equipment shall

- a. Be calibrated or verified or both, at specified intervals, or prior to use, against measurement standards traceable to international or national measurement standards; where no such standards exist, the basis uses for calibration or verification shall be recorded (see 4.2.4);
- b. Be adjusted or re-adjusted as necessary.
- c. Have identification in order to determine its calibration status:
- d. Be safeguarded from adjustments that would invalidate the measurement result;
- e. Be protected from damage and deterioration during handling, maintenance and storage.

In addition, the **EVEREST ENGINEERING WORKS** shall assess and record the validity of the previous measuring

ISO	REVISION	DATE	ISSUE	Page 20 of 28
9001:2008	0	1 st Nov. 2011	1	

results when the equipment is found not to conform to requirements.

The **EVEREST ENGINEERING WORKS** shall take appropriate action on the equipment and any product affected. Records of the results of calibration and verification shall be maintained (see 4.2.4).

When used in the monitoring and measurement of specified requirements, the ability of computer software to satisfy the intended application shall be verified. This shall be undertaken prior to initial use and reconfirmed as necessary.

	Measurement, Analysis, Improvement: Clause No. 8	
8.1	General	
	EVEREST ENGINEERING WORKS defines plans and implements monitoring, measurement, analysis and improvement processes needed.	
	a) To demonstrate conformity to product requirements,b) To ensure conformity of the quality management system,c) To continual improve the effectiveness of the quality management system.	
This includes the determination of the need for, and u Applicable methodologies including statistical techniques.		
8.2	Monitoring and Measurement	
8.2.1	Customer Satisfaction	
	EVEREST ENGINEERING WORKS monitors information on customer satisfaction and/or dissatisfaction as one of the measurements of performance of the quality management system. The methodologies for obtaining and using this information are determined.	
Ref: Th	e flow chart (CUSUP – FC – 01) for Customer Satisfaction Survey.	
8.2.2 Internal Audit		
	EVEREST ENGINEERING WORKS conducts periodic internal audits to determine whether the quality management system:	
	a) Conforms to the requirements of this International Standard;	

	Everest Er	ngineering V	Vorks	
ISO	REVISION	DATE	ISSUE	
				Page 21 of 28
9001:2008	0	1 st Nov. 2011	1	

b) Has been effectively implemented and maintained.

EVEREST ENGINEERING WORKS plans the audit program taking into consideration the status and importance of the activities and areas to be audited as well as the results of previous audits.

The audit scope, frequency and methodologies are defined. Personnel other than those who perform the activity being audited conduct audits.

EVEREST ENGINEERING WORKS defines the responsibilities and requirements for planning and conducting audits, and for reporting results and maintaining records in a documented procedure.

Follow-up actions include the verification of the implementation of corrective action, and the reporting of verification results.

Ref: The flow chart (IA - FC - 01) for Internal Audit

8.2.3	8.2.3 MONITORING AND MEASUREMENT OF PROCESSES					
	EVEREST ENGINEERING WORKS applies suitable methods for measurement and monitoring of those realization processes necessary to meet customer requirements.					
These methods confirm the continuing ability of each to satisfy its intended purpose. When planned results achieved, correction and corrective action is ta appropriate.						
	Note: When determining suitable methods, it is advisable that the organization consider the type of extent of monitoring of measurement appropriate to each of its processes in relation to their impact on the conformity to product requirements and on the quality management system.					
Ref:	The relevant realization processes/ procedures documents indicate appropriate monitoring and measurement activity.

maintained.

Nonconforming product may be corrected and subject to reverification after correction to demonstrate conformity. It may be required that the proposed rectification of nonconforming product be reported for concession to the customer, the end-user, regulatory body or other body.

Ref: The flow chart (NCM-FC-01) for Non Conforming Material/Product / Process.

8.4 ANALYSIS OF DATA

EVEREST ENGINEERING WORKS determines and collects appropriate data to demonstrate the suitability and effectiveness of the quality management system. It then analyses and evaluates them for deciding the continual improvement of the system. The data is collected at specified periodicity and the designated executives provide the same to Management Representative. The data is compiled and trend graphs are made by Management Representative to indicate the comparison.

This data is analyzed and reviewed quarterly by the Proprietor to decide the further improvements.

The "Analysis of Data" includes:

The data generated as a result of product / process monitoring and measurement in the organization;

The Data collected from other relevant sources, e.g., Bench Marking Data from relevant associations or from the customers.

During the Management Review, the data is analyzed as a minimum for focusing the information relating to:

Customer satisfaction

Conformance to product requirements,

Characteristics and their trends in processes and of products Opportunities for preventive action,

EVEREST ENGINEERING WORKS identifies preventive action to eliminate the causes of potential nonconformities to prevent occurrence. Preventive actions taken are appropriate to the impact of the potential problems.

EVEREST ENGINEERING WORKS Quality Procedure for Preventive Action defines requirements for:

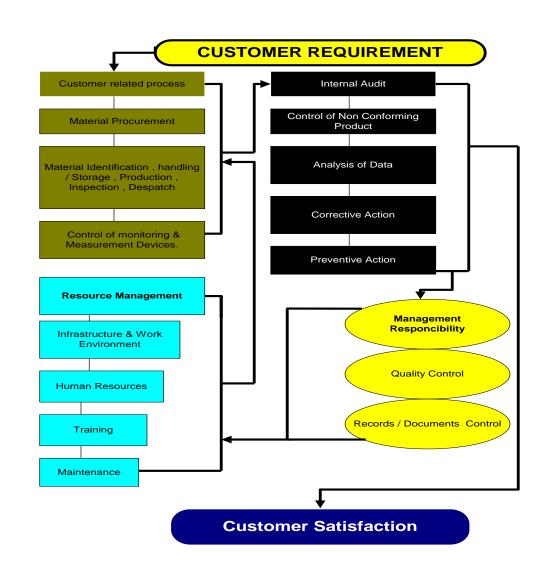

- a) Identifying potential nonconformities and their causes;
- b) Evaluating the need for action to prevent occurrence of nonconformities;
- c) Determining and ensuring the implementation of preventive action needed;
- d) Recording results of action taken; and
- e) Reviewing the effectiveness of the preventive action taken.
